WHAT IS THIS PRODUCT?

Type: Carmignac Sécurité is a French common fund (Fonds Commun de Placement – FCP), governed by European Directive 2009/65/EC (UCITS)

Objective: The fund's objective is to outperform its reference indicator over a recommended investment horizon of two years. The reference indicator is the ICE BofA 1-3 Year All Euro Government Index, with coupons reinvested (EIAS). This index tracks the performance of sovereign debt denominated in EUR publicly issued by Eurozone Member States on the euro bond market or the issuer's domestic market, with a residual period remaining to the final maturity of under three years. It is calculated with coupons reinvested.

The fund's portfolio mainly comprises bonds, debt securities and money market instruments denominated mostly in euro, as well as variable rate bonds. The weighted average of bond ratings shall be at least investment grade. No more than 10% of the net assets may be invested in bonds rated below investment grade for each category of issuer. The portfolio's modified duration is between -3 and +4. Modified duration is defined as the change in portfolio capital (as %) for a change in interest rates of 100 basis points.

The decision to buy, hold or sell debt securities will not automatically and solely depend on their rating but also an internal analysis based mainly on return, credit rating, liquidity and maturity criteria.

This fund is an actively managed UCITS where the investment manager has discretion over the composition of the portfolio, subject to the stated investment objectives and policy. The fund's investment universe is at least partly derived from the indicator. The fund's investment strategy is not dependent on the indicator. Therefore, the Sub-fund's holdings and weightings may

substantially deviate from the composition of the indicator. There is no limit set on the level of such deviation.

Term: The fund was launched on 12 January 1989 for a period of 99 years, except in the cases of early dissolution or extension.

Intended retail investor: Due to the fund's bond market exposure and its low modified duration, this fund is suitable for investors who do not plan to withdraw their money within 2 year(s), and whose goal is to grow their investment without any capital guarantee.

The appropriate amount to invest in this fund depends on the personal situation of the investor, their knowledge of investment products and experience, their personal wealth, their cash requirements now and in the future, and their degree of risk aversion.

Investments may be redeemed each business day on request. Subscription and redemption requests are centralised on each NAV calculation and publication day before 18:00 CET/ CEST and are executed on the next business day using the previous day's NAV

The Depositary of the sub-fund is BNP Paribas Securities Services, Luxembourg branch.

These units are accumulation units.

The fund prospectus and latest key information document, as well as the latest annual report are available on the website www.carmignac.com, directly from the manufacturer or on the website www.fundinfo.com. Information on past performance for the last 10 years, where this data is available, and calculations of monthly past performance scenarios are available on the website www.carmignac.com.

WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

Risks not sufficiently considered by the indicator include:

- **Credit risk:** the fund is invested in securities whose credit rating may decline, meaning there is a risk that the issuer may not be able to meet its commitments. Should an issuer's creditworthiness deteriorate, the value of the financial instruments linked to this issuer may fall.
- **Liquidity risk:** the markets in which the fund participates may occasionally be subject to temporary illiquidity. These market distortions could have an impact on the pricing conditions under which the fund may be caused to liquidate, initiate or modify its positions.
- **Counterparty risk:** the fund may suffer losses if a counterparty defaults and is unable to meet its contractual obligations, especially in the case of derivatives traded OTC.
- **Risk linked to the impact of techniques such as the use of derivatives:** the use of derivatives may lead to certain risks of loss specific to such strategies.

← Lower risk Higher risk →

The recommended holding period is 2 year(s).

If the fund is denominated in a currency other than the official currency of the country where the fund is being marketed, the return, when expressed in the official currency of the country where the fund is being marketed, may change depending on currency fluctuations.

This product does not include any protection from future market performance so you could lose some or all of your investment.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity of the fund to pay you.

WHAT HAPPENS IF CARMIGNAC GESTION IS UNABLE TO PAY OUT?

For your protection the sub-fund's assets are held with a separate company, a depositary, so the sub-fund's ability to pay out would not be affected by the insolvency of the manufacturer. If the sub-fund is terminated or wound up, the assets will be liquidated and you will receive an appropriate share of any proceeds but you may lose part or all of your investment. There is no compensation or guarantee scheme in place which may offset, all or any of, this loss.

There is no compensation or guarantee system in place that would fully or partially offset this loss.
