

Investment strategy

The BFI Systematic Conservative is a mixed fund with a global focus. The investment objective is to achieve the greatest possible participation in the upward movements of the financial markets for the targeted risk profile, while at the same time reducing losses in volatile market phases. Tactical signals are used with the aim of maximising the risk-adjusted return over the long term. The fund invests in liquid instruments, in order to allow a rapid intervention to limit losses in the event of market turbulence. The sub-fund may also invest in money market funds. In order to achieve the investment objective, the equity allocation may vary very flexibly between 0 per cent and 100 per cent depending on the volatility, with a long-term average equity allocation of 30 per cent. The sub-fund has a moderate risk profile.

Performance and risk indicators

	Fund (incl. costs)
Performance	BFI Systematic Conservative
Current Year (YTD)	0.37%
1 month	0.07%
3 months	0.23%

Total fund assets	EUR 68'406'899

Past performance is not a reliable indicator of future results.

The investment strategy was adjusted on 1 July 2021. Up to this point, the fund invested worldwide as a fund of funds in those investment funds with the best prospects of returns based on trends in the financial market. Up to 30% of investments were made systematically in equity funds, as well as above all in bond funds and money market funds.

Investment risks

Please consult the fund prospectus for full information on investment risks. The following risks, in particular, could influence the sub-fund and lead to fluctuations or losses in value:

Interest rate risk: An interest rate risk exists when the value of bonds and other debt securities rises and falls as a result of interest rate developments. Falling interest rates generally result in an increase in the value of existing debt securities, while rising interest rates generally lead to a loss in value.

Currency risk: A currency risk exists when the fund invests in assets that are denominated in a foreign currency. Any devaluation of the foreign currency against the base currency of the fund leads to a fall in value of the assets denominated in the foreign currency.

Derivatives risk: The use of derivatives increases the likelihood of losses due to leverage. Derivatives enable investors to achieve high returns on small price movements of the underlying instrument. However, investors can also suffer large losses if the price of the underlying instrument changes significantly to their disadvantage.

Algorithm risk: Using an algorithm can give rise to additional risks, for example cyber security risks, the risk of human error, risks of programming or modelling errors in the algorithm development, trading risks or regulatory risks. A malfunction opens up potential for human intervention, which could even go as far as deactivating the algorithm.

Important legal information

This is a marketing document. Please consult the fund prospectus and the Key Investor Information Document (KIID) before making any final investment decision. This marketing document is for information purposes only and does not constitute an offer or an invitation to buy or sell fund units, nor is it to be regarded as an invitation to submit an offer for the conclusion of a contract for an investment service or ancillary service. It is expressly not intended for persons whose nationality or place of residence prohibits them from accessing such information under the applicable legislation. Neither this marketing document nor copies thereof may be sent or taken to the United States or distributed in the United States or to a US person (within the meaning of Regulation S of the US Securities Act of 1933 as amended). This document is not a substitute for personal advice.

BFI Systematic Conservative is a sub-fund of Baloise Fund Invest (Lux), an umbrella fund registered in Luxembourg under Luxembourg law, which qualifies as a UCITS under Directive 2009/65/EC. For individual sub-funds or unit classes, the group of eligible investors specified in the fund prospectus may be further restricted. The fund prospectus, the Key Investor Information Document respectively the basic information sheet, the articles of association, and the annual and half-year reports can be requested free of charge from the company's representative in Switzerland, First Independent Fund Services AG, Klausstrasse 33, CH-8008 Zürich, and from the paying agent and information centre in the respective country of distribution. The fund prospectus, the Key Investor Information Document (KIID) and the annual and half-year reports are also available in German and French on the website www.fundinfo.com.

A summary of the investor rights is available in English on the management company's website at www.waystone.com/waystone-policies. Please note that under Article 93a of Directive 2009/65/EC, the management company can decide to terminate the agreements reached for the distribution of the sub-fund in one or more EU member states.

Past performance, simulations or projections are not a reliable indicator of future performance. The historical performance data does not include any costs charged when subscribing to and redeeming units. Commissions and fees negatively impact performance. All investments involve risks, particularly in terms of fluctuations in value and return. If the currency of a financial product differs from your reference currency, the rate of return may increase or decrease as a result of currency fluctuations. The information contained in this document does not take into account the specific or future investment objectives, financial or tax situation or particular needs of any individual recipient.

Units in this sub-fund may not be offered, sold or supplied in the USA or to US taxpayers residing outside the USA.

Definitions

Maximum drawdown: Maximum drawdown: Risk indicator reflecting the maximum loss an investor could have suffered with a certain investment to date. It measures the greatest loss from a previous peak of the equity curve to the lowest subsequent trough.

Volatility: Volatility: Common risk indicator reflecting the degree of variation of the return delivered by a certain investment. It measures how far that return can deviate from its mean value, both positively and negatively.

Sharpe ratio: Sharpe ratio: Indicator of risk-adjusted return, reflecting the profitability of an investment relative to its volatility. An investment with a higher Sharpe ratio will deliver a higher return per unit of risk.

Risk/return ratio: Risk-return ratio: Indicator of risk-adjusted return, reflecting the profitability of an investment relative to its maximum drawdown. An investment with a higher risk-return ratio will deliver a higher return per unit of risk.

Total expense ratio (TER): The total expense ratio (TER) measures the total costs associated with managing and operating an investment fund. These costs consist first and foremost of management fees and additional expenses, such as trading fees, fees for legal advice, audit fees and other operating costs. The total costs of the fund are divided by the total fund assets to arrive at a percentage amount, which corresponds to the TER.

Equity exposure: Equity exposure is the risk of fluctuation and loss in value that the investor is exposed to as a result of negative changes in the equity value of the part of the portfolio that is invested directly or indirectly in equities.
