Investment strategy

Investment objective: The BFI Systematic Balanced mixed fund aims to achieve a positive long-term investment result in EUR on the international stock and bond markets over an investment horizon of at least five years.

Investment strategy: The BFI Systematic Balanced is a fund with a global focus that in line with the targeted risk profile aims to achieve the greatest possible participation in the financial markets' upward movements, while at the same time reducing losses in volatile market phases. To that end tactical financial market signals are used with the aim of maximising the risk-adjusted return over the long term. Hence, the central component of the investment strategy is the underlying algorithm, which systematically calculates the optimum allocation of the various asset classes, adhering to the volatility target of 7.5%. Participation in the individual markets is implemented primarily using highly liquid listed derivatives such as futures. The fund can invest up to 100% of its assets in liquid funds and money market funds. In order to achieve the investment objective, the equity allocation may vary between 0% and 100%, with a long-term average equity allocation of 50%. The fund can use leverage.

Benchmark: The fund is actively managed without reference to a benchmark index.

Please consult the fund prospectus and the key investor information and/or the key information document before making a final investment decision.

Indexed performance

Past performance is not a reliable indicator of future results.

The investment strategy was adjusted on 1 July 2021. Up to this point, the fund invested worldwide as a fund of funds in those investment funds with the best prospects of returns based on trends in the financial market. Up to 60% of investments were made systematically in equity funds, as well as above all in bond funds and money market funds.

Investment risks

Please consult the fund prospectus for full information on investment risks. The following risks, in particular, could influence the sub-fund and lead to fluctuations or losses in value:

General investment risks: The value of investments is based on the relevant market value. Asset value can fluctuate considerably depending on the overall stock market trend and the performance of the securities held by a fund. There is no guarantee that the fund investment objective will be met or that investors will receive all of the capital they invested back, achieve a specific return or be able to give their units back to the fund management company at a certain price. Past performance is not an indicator of future investment results.

Market risk: Market risk is a general risk associated with all investments. Deteriorating market conditions or general uncertainty surrounding the economic markets may trigger a decline in the market value of existing or potential investments or result in investments being less liquid. These declines in value or illiquidity could result in losses and fewer investment opportunities for a fund. Market risks can be created, in particular, by political uncertainty, currency export restrictions and changes in legislation and overall fiscal conditions.

Currency risk: A currency risk exists when the fund invests in assets that are denominated in a foreign currency. Any devaluation of the foreign currency against the base currency of the fund leads to a fall in value of the assets denominated in the foreign currency.

Derivatives risk: The use of derivatives increases the likelihood of losses due to leverage. Derivatives enable investors to achieve high returns on small price movements of the underlying instrument. However, investors can also suffer large losses if the price of the underlying instrument changes significantly to their disadvantage.

Sustainability risk: A sustainability risk is as an environmental, social or governance event or condition that, if it occurs, could actually or potentially cause a negative material impact on the value of the fund investments.

Algorithm risk: Using an algorithm can give rise to additional risks, for example cyber security risks, the risk of human error, risks of programming or modelling errors in the algorithm development, trading risks or regulatory risks. A malfunction opens up potential for human intervention, which could even go as far as deactivating the algorithm.

Emerging market risk: Investments in emerging markets are associated with different and/or higher risks than investments in securities from industrialised countries. In emerging markets, the legal, judicial and regulatory infrastructure is still being developed, creating considerable legal uncertainty for local market participants and their counterparties. These markets also tend to be small cap markets that can be volatile and illiquid.

Definitions

Maximum drawdown: Maximum drawdown: Risk indicator reflecting the maximum loss an investor could have suffered with a certain investment to date. It measures the greatest loss from a previous peak of the equity curve to the lowest subsequent trough.

Volatility: Volatility refers to the extent and frequency of fluctuations in the price of securities, commodities, financial derivatives, etc. over a certain period. It is measured as the deviation from the mean value of price changes in that period.

Equity exposure: Equity exposure is the risk of fluctuation and loss in value that the investor is exposed to as a result of negative changes in the equity value of the part of the portfolio that is invested directly or indirectly in equities.

Sharpe ratio: Sharpe ratio: Indicator of risk-adjusted return, reflecting the profitability of an investment relative to its volatility. An investment with a higher Sharpe ratio will deliver a higher return per unit of risk.

Ongoing charges: Ongoing charges are calculated as the ratio of costs to average fund assets. All costs that are charged directly to the fund assets and reduce fund performance are included in ongoing charges, particularly the annual management fee. Compared with the total expense ratio, ongoing charges include other cost components, in particular the costs of target funds the fund invests in.

Future (futures contract): A future (futures contract) is a binding agreement between two parties to trade an asset on a futures exchange at a predefined price and on predefined terms on a specific date in the future. The loss/profit from the futures position generated in the process is offset daily on a "mark-to-market" basis.

SFDR: Sustainable Finance Disclosure Regulation - Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector.

modified portfolio duration: The modified portfolio duration is used to measure sensitivity to changes in interest rates. It indicates the percentage by which the bond or bond fund price rises if the market interest rate falls by one percent, or the percentage by which the bond or bond fund price falls if the market interest rate rises by one percent.

subordinated bonds: The term "subordinated bonds" refers to the repayment order in the event the issuer becomes insolvent, with holders of subordinated debt instruments only being paid once the claims of holders of senior debt securities have been settled in full.

Important legal information

This is a marketing document. Please consult the fund prospectus and the Key Investor Information Document (KIID) before making any final investment decision. This marketing document is for information purposes only and does not constitute an offer or an invitation to buy or sell fund units, nor is it to be regarded as an invitation to submit an offer for the conclusion of a contract for an investment service or ancillary service. It is expressly not intended for persons whose nationality or place of residence prohibits them from accessing such information under the applicable legislation. Neither this marketing document nor copies thereof may be sent or taken to the United States or distributed in the United States or to a US person (within the meaning of Regulation S of the US Securities Act of 1933 as amended). This document is not a substitute for personal advice.

BFI Systematic Balanced is a sub-fund of Baloise Fund Invest (Lux), an umbrella fund registered in Luxembourg under Luxembourg law, which qualifies as a UCITS under Directive 2009/65/EC. For individual sub-funds or unit classes, the group of eligible investors specified in the fund prospectus may be further restricted. The fund prospectus, the Key Investor Information Document respectively the basic information sheet, the articles of association, and the annual and half-year reports can be requested free of charge from the company's representative in Switzerland, First Independent Fund Services AG, Feldeggstrasse 12, CH-8008 Zürich, and from the paying agent and information centre in the respective country of distribution. The fund prospectus, the Key Investor Information Document (KIID) and the annual and half-year reports are also available in German and French on the website www.fundinfo.com.

A summary of the investor rights is available in English on the management company's website at www.waystone.com/waystone-policies. Please note that under Article 93a of Directive 2009/65/EC, the management company can decide to terminate the agreements reached for the distribution of the sub-fund in one or more EU member states.

Past performance, simulations or projections are not a reliable indicator of future performance. The historical performance data does not include any costs charged when subscribing to and redeeming units. Commissions and fees negatively impact performance. All investments involve risks, particularly in terms of fluctuations in value and returns. If the currency of a financial product differs from your reference currency, the rate of return may increase or decrease as a result of currency fluctuations. The information contained in this document does not take into account the specific or future investment objectives, financial or tax situation or particular needs of any individual recipient.

Units in this sub-fund may not be offered, sold or supplied in the USA or to US taxpayers residing outside the USA.
